PROGRAM DESCRIPTION
While a basic understanding of transplantation goes back to the early days of transplantation, rapid changes in family and community structure, communication, technology, population aging, and ease of travel across the world have disrupted existing paradigms. Moreover, new evidence has shed light on the role of preventive measures established for the general population in the care of transplant candidates and recipients. It is, therefore, imperative for both professionals and the public to understand the gap between existing practice and emerging evidence in public health aspects of transplantation.

TARGET AUDIENCE
This symposium is designed to enhance knowledge, competence and performance of transplant surgeons, transplant coordinators, nephrologists, nephrology fellows, and other dialysis care providers.

OBJECTIVES
After attending this educational program, the participants will be able to identify 1-2 strategies as it pertains to:
- areas where data can be used by the program to increase transplant and guide patient care;
- the impact of obesity on outcomes in transplant candidates, recipients, and live donors;
- identification of appropriate cancer screening tests in the pre- and post-transplant period;
- the identification of possible obesity related post-transplant complications;
- listing preventive measures to be utilized by transplant recipients when traveling.
