“Mom seems more confused and disoriented lately”

Does this sound familiar?

MEMORY LOSS

Warning Signs

#Forgetfulness
#Misplaces/ Hides Items
#Mood swings/ Agitation
#Wandering, suspiciousness
#Hallucinations

If this sounds like someone you know, Have him or her evaluated. Memory loss Is not a normal part of aging. Some memory problems can be reversed with early detection. Alzheimer’s disease and other dementias are often progressive disorders which result in memory loss, difficulty in thinking and speaking clearly and eventually complete inability to take care of oneself.

Since signs of Alzheimer’s disease and other dementias can be caused by other illnesses, a careful diagnosis is important.

If you or someone you care for have any of these problems,

CONTACT:
