**Goal 1 Improve the Accuracy of Patient Identification**

*Use at least two patient identifiers: patient’s full name and date of birth (Do not use patient’s room number or physical location as an identifier) when administering medications or blood products; taking blood samples and other specimens for clinical testing, or when providing any other treatments or procedures.*

*Eliminate transfusion errors related to patient misidentification. Label containers in presence of patient.*

**Goal 2 Improve the Effectiveness of Communication Among Caregivers**

Report critical results of tests and diagnostic procedures to the appropriate staff on time.

Critical results of tests and diagnostic procedures fall significantly outside the normal range and may indicate a life threatening situation. The objective is to provide the responsible licensed caregiver these results within an established time frame so that the patient can be promptly treated.

**Goal 3 Improve the Safety of Using Medications**

Label all medications, medication containers (e.g., syringes, medicine cups, basins), or other solutions on and off the sterile field in perioperative and other procedural settings.

Reduce the likelihood of patient harm associated with the use of Anticoagulation therapy. Take extra care with the patient who takes the medicine to thin their blood.

Maintain and communicate accurate patient medication Information through the Medication Reconciliation process.
Record and pass along correct information about a patient’s medicines. Find out what medicines the patient is taking. Compare those medications to new medication given to the patient. Make sure the patient knows which medicines to take when they are at home. Tell the patient it is important to bring their up-to-date list of medications every time they visit a doctor or a health care provider.

**Goal 6 Reduce the Harm Associated with Clinical Alarm Systems**

1. Improve the safety of Clinical alarm System
2. Input from the medical staff & clinical areas
3. Risk to patients if the alarm signal is unattended
4. Identify whether specific alarm is needed
5. Analyze incident history for potential harm
6. Establish clinically appropriate alarm setting
7. Staff education and proper orientation on the safety of alarm systems

**Goal 7 Reduce the Risk of Health Care-associated Infections.**

We comply with current Centers for Disease Control and Prevention (CDC) hand hygiene guidelines
Implement evidence-based practices to prevent health care-associated infections due to

**Goal 15 Identify Individuals at Risk for Suicide**

The organization identifies patients at risk for suicide. Applicable to psychiatric hospitals and patients being treated for emotional or behavioral disorders in general hospital
Conduct a risk assessment that identifies specific patient characteristics and environmental features that may increase or decrease the risk for suicide. Address the patient’s immediate safety needs & most appropriate setting for treatment. When a patient at risk for suicide & leaves the hospital care, provide to the patient and his/her family prevention information such as, a crisis hotline (1-800-LIFENET) or (1-800- 543-3638)

**Universal Protocol**

The Universal Protocol (UP1) explains how to prevent a procedure on a wrong patient, wrong side and wrong site. It ensures that the correct surgery is done on the correct patient and at the correct site on the patient's body.
Conduct a pre-procedure verification process as stated in the Universal Protocol (UP1).
Mark the correct site on the patient’s body where the surgery is to be performed.
Pause and Conduct a “time-out” immediately before starting the procedure as described in the UP1.
