Standard Rotation: Neonatal Intensive Care at UHB or KCHC-Senior Resident

Resident: PL2 or PL3 resident in pediatrics

Prerequisite: Completion (or waiver) of PL-1 year with satisfactory summative evaluations in neonatology and term newborn nursery along with maintenance of NRP Certification.

Primary Goals for this Rotation

**GOAL:** Perinatal Prevention. Demonstrate the pediatrician's role in and advocate for programs to reduce morbidity and mortality from high-risk pregnancies.

<table>
<thead>
<tr>
<th>1</th>
<th>Explain and describe strategies to reduce fetal and neonatal mortality, including use of group B strep prophylaxis and perinatal steroids.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Access and apply to clinical evaluation and management:</td>
</tr>
<tr>
<td></td>
<td>1 : Basic vital statistics that apply to newborns (neonatal and perinatal mortality, etc)</td>
</tr>
<tr>
<td></td>
<td>2 : Prenatal services available in one's region</td>
</tr>
<tr>
<td></td>
<td>3 : Tests commonly used by obstetricians to measure fetal well-being</td>
</tr>
<tr>
<td>3</td>
<td>Recognize potential adverse outcomes for the fetus and neonate of common prenatal and perinatal conditions and demonstrate the pediatrician's role in assessment and management strategies to minimize the risk to the fetus and/or newborn in the following situations:</td>
</tr>
<tr>
<td></td>
<td>1. Maternal infections/exposure to infection during pregnancy including tuberculosis, HIV, hepatitis, rubella, etc.</td>
</tr>
<tr>
<td></td>
<td>2. Fetal exposure to harmful substances (alcohol, tobacco, environmental toxins, medications, street drugs)</td>

COMPETENCY BASED CURRICULUM FOR PEDIATRIC RESIDENCY EDUCATION
NEONATAL INTENSIVE CARE AT KCHC OR UHB – SENIOR RESIDENT

health such as lupus, HELLP syndrome, maternal thrombocytopenia

GOAL: Resuscitation and Stabilization. Provide leadership and support supervision in assessing, resuscitating and stabilizing critically ill neonates.

1 : Assure performance of steps in resuscitation and stabilization, particularly airway management, vascular access, volume resuscitation, indications for and techniques of chest compressions, resuscitative pharmacology and management of meconium deliveries.

2 : Identify and address the common causes of acute deterioration in previously stable NICU patients.

3 : Function appropriately in neonatal resuscitations by leading the NICU team:
   1. Participating in resuscitations
   2. Completing Neonatal Resuscitation Program (NRP)
   3. Using neonatal resuscitation techniques and drugs appropriately

GOAL: Common Signs and Symptoms. Provide leadership to junior residents and other healthcare staff in the evaluation and management of common signs and symptoms of disease in premature and ill newborns under the supervision of a neonatologist.

1 : Supervise junior resident and evaluate and manage patients with the signs and symptoms that present commonly in the NICU.

   1 :General: feeding problems, history of maternal infection or exposure, hyperthermia, hypothermia, intrauterine growth failure, irritability, jitteriness, large for gestational age, lethargy, poor post-natal weight gain, prematurity

   2 :Cardiorespiratory: apnea, bradycardia, cyanosis, dehydration, heart murmur, hypertension, hypotension, hypovolemia, poor pulses, respiratory distress (flaring, grunting, tachypnea), shock

   3 :Dermatologic: birthmarks, common skin rashes/conditions, discharge and/or inflammation of the umbilicus, hyper- and hypopigmented lesions, proper skin care for extreme prematures

   4 :GI/surgical: abdominal mass, bloody stools, diarrhea, distended abdomen, failure to pass stool, gastric retention or reflux, hepatosplenomegaly, vomiting

   5 :Genetic/metabolic: apparent congenital defect or dysmorphic syndrome, metabolic derangements (glucose, calcium, acid-base, urea, amino acids, etc.)

   6 :Hematologic: abnormal bleeding, anemia, jaundice in a premature or seriously ill neonate, neutropenia, petechiae, polycythemia, thrombocytopenia
7: Musculoskeletal: birth defects and deformities, birth trauma and related fractures and soft tissue injuries, dislocations

8: Neurologic: birth trauma related nerve damage, early signs of neurologic impairment, hypotonia, macrocephaly, microcephaly, seizures, spina bifida

9: Parental stress and dysfunction: anxiety disorders, poor attachment, postpartum depression, substance abuse, teen parents

10: Renal/urologic: abnormal genitalia, edema, hematuria, oliguria, proteinuria, renal mass, urinary retention

**GOAL: Common Conditions. Provide leadership in recognition and management, under the supervision of a neonatologist, of the common conditions in patients encountered in the NICU.**

1: Supported by appropriate faculty involvement, supervise junior residents in the evaluation and management of patients with conditions that present commonly in the NICU:

1. General: congenital malformations
2. Cardiovascular: cardiomyopathy, congenital heart disease (cyanotic and acyanotic), congestive heart failure, dysrhythmias (e.g. supraventricular tachyarrhythmia, complete heart block), pericarditis
3. Genetic, endocrine disorders: abnormalities discovered from neonatal screening programs as they affect the premature infant, common chromosomal anomalies (Trisomy 13, 18, 21, Turner's), inborn errors of metabolism, infant of a diabetic mother, infant of a mother with thyroid disease, uncommon conditions such as congenital adrenal hyperplasia, hypothyroidism, hyperthyroidism
4. GI/nutrition: biliary atresia, breast feeding support for mothers and infants with special needs (high risk premature, maternal illness, multiple birth, etc.), complications of umbilical catheterization, gastroesophageal reflux, growth retardation, hepatitis, hyperbilirubinemia, meconium plug, necrotizing enterocolitis, nutritional management of high risk neonates or those with special needs
5. Hematologic conditions: coagulopathy of the newborn, erythroblastosis fetalis, hemophilia, hydrops fetalis, hyperbilirubinemia, splenomegaly
6. Infectious disease: central line infections, Group B Streptococcal infections, hepatitis, herpes simplex, immunization of the premature neonate, infant of mother with HIV, intrauterine viral infections, neonatal sepsis and meningitis, nosocomial infections in the NICU, syphilis, varicella exposure
7. Neurologic disorders: central apnea, CNS malformations, drug withdrawal, hearing loss in high risk newborns (prevention and screening), hydrocephalus, hypoxic-ischemic encephalopathy, intraventricular hemorrhage, retinopathy of prematurity, seizures, spina bifida
8. Pulmonary disorders: atelectasis, bronchopulmonary dysplasia, meconium aspiration, persistent pulmonary hypertension of the newborn, pneumonia, pneumothorax, respiratory distress syndrome, transient tachypnea of the newborn
9. Renal: acute and chronic renal failure, hematuria, hydronephrosis, oliguria, proteinuria
10. Surgery (pre- and post-operative care), diaphragmatic hernia, esophageal or gut atresia, gastroschisis, omphalocele, intestinal obstruction, necrotizing enterocolitis, perforated viscus, volvulus

GOAL: Diagnostic Testing. As the supervising senior, and under the direction of a neonatologist, explain the indications and limitations and interpretation of laboratory and imaging studies unique to the NICU, and provide junior resident oversight in performing these duties.

1: Demonstrate understanding of common diagnostic tests and imaging studies used in the NICU by being able to:

1. Explain the indications for and limitations of each study.
2. Know or be able to locate readily gestational age-appropriate normal ranges.
3. Interpret the results in the context of the specific patient.
4. Discuss therapeutic options for correction of abnormalities.

2: Use appropriately the following evaluations that may have specific application to neonatal care:

1. Serologic and other studies for transplacental infection
2. Direct and indirect Coomb's tests
3. Neonatal drug screening
4. Cranial ultrasound for intraventricular hemorrhage
5. Abdominal X-rays for placement of umbilical catheter
6. Chest X-rays for endotracheal tube placement, air leak, heart size, and vascularity

3: Use appropriately the following laboratory tests when indicated for patients in the neonatal intensive care setting:

1. CBC with differential, platelet count, RBC indices
2. Blood chemistries: electrolytes, glucose, calcium, magnesium, phosphate
3. Renal function tests
4. Tests of hepatic function (PT, albumin) and damage (liver enzymes, bilirubin)
5. Serologic tests for infection (e.g., hepatitis, HIV)
6. CRP, ESR
7. Therapeutic drug concentrations
8. Coagulation studies: platelets, PT/PTT, fibrinogen, fibrin split products, D-dimers, DIC screen
9. Arterial, capillary, venous and cord blood gases
10. Detection of bacterial, viral, and fungal pathogens
11. Urinalysis
12. CSF analysis
13. Gram stain
14. Stool studies
15. Toxicologic screens/drug levels
16. Other fluid studies (e.g., pleural fluid, joint fluid)
17. Newborn screening tests

4 : Appropriately use the following imaging or radiographic or other studies when indicated for patients in the NICU setting:

1. Chest X-ray
2. Abdominal series
3. Skeletal survey
4. CT scans
5. MRI
6. Nuclear medicine scans
7. Electrocardiogram and echocardiogram
8. Cranial ultrasonography

GOAL: Monitoring and Therapeutic Modalities. Know how to use the physiologic monitoring, special technology and therapeutic modalities used commonly in the care of the fetus and newborn.

1 : Demonstrate understanding of the monitoring techniques and special treatments commonly used in the NICU by being able to:

1. Discuss the indications, contraindications and complications.
2. Describe the general technique for use in infants.
3. Interpret the results of monitoring.

2 : Assure appropriate use by juniors of the following monitoring and therapeutic techniques in NICU.

1. Physiologic monitoring of temperature, pulse, respiration, blood pressure
2. Pulse oximetry
3. Neonatal pain and drug withdrawal scales

3 : Use appropriately the following treatments and techniques in the neonatal intensive care unit under supervision by the attending neonatologist, monitoring
effects and anticipating potential complications specific to each procedure.

1. CPAP or assisted ventilation
2. Endotracheal intubation
3. Administration of surfactant
4. Positive pressure ventilation and basic ventilator management
5. Nitric oxide therapy
6. Phototherapy
7. Umbilical arterial and venous catheterization
8. Central hyperalimentation and parenteral nutrition
9. Enteral nutrition
10. Analgesics, sedatives and paralytics
11. Blood and blood product transfusions, including exchange transfusion
12. Vasoactive drugs (pressors and inotropes)
13. Judicious use of antibiotics
14. Administration of medications specific to the needs of the newborn (e.g., Vitamin K)
15. Arterial puncture
16. Venous access by peripheral vein
17. Umbilical artery and vein catheterization

4 : Use appropriate resources to facilitate the transition to home of the technology-dependent neonate.

GOAL: Pediatric Competencies in Brief: Demonstrate high standards of professional competence while working with patients in the Neonatal Intensive Care Unit.

Competency 1: Patient Care. Assure provision of family-centered patient care that is development- and age-appropriate, compassionate, and effective for the treatment of health problems and the promotion of health.

1. Assure appropriate approach to assessment and daily management of seriously ill neonates, under the guidance of a neonatologist, using evidence-based decision-making and problem-solving skills.
2. Assure prioritization of patients’ problems.
3. Gather essential, accurate, and even subtle information via interviewing parents and performing complete physical exams.
4. Lead team in monitoring and following up on patients appropriately.
5. Discuss and weigh available alternatives for diagnostic studies and treatments with team.
6. Assist juniors in using diagnostic findings appropriately and making treatment decisions.
7. Provide emotional, social, and culturally sensitive support to families of NICU infants, including those at home.
8. Lead members of the health care team in providing family centered care.
Competency 2: Medical Knowledge. Understand the scope of established and evolving biomedical, clinical, epidemiological and social-behavioral knowledge needed by a pediatrician; demonstrate the ability to acquire, critically interpret and apply this knowledge in patient care.

1. Demonstrate a commitment to acquiring the knowledge base expected of general pediatricians caring for seriously ill neonates under the guidance of a neonatologist.
2. Know and/or access medical information efficiently, evaluate it critically, and apply it appropriately to the care of ill newborns.
3. Know and teach indications, contraindications, and risks of commonly used medications and procedures.

Competency 3: Interpersonal Skills and Communication. Demonstrate interpersonal and communication skills that result in information exchange and partnering with patients, their families and professional associates.

1. Provide effective and sensitive communication with families of infants in the NICU setting.
2. Effectively lead an interdisciplinary team in the NICU to create and sustain information exchange and teamwork for patient care.
3. Maintain and also assure junior resident maintain accurate, timely, organized and legally appropriate medical records in the critical care setting of the NICU.
4. Create therapeutic relationships with families in the NICU.

Competency 4: Practice-based Learning and Improvement. Demonstrate knowledge, skills and attitudes needed for continuous self-assessment, using scientific methods and evidence to investigate, evaluate, and improve one's patient care practice.

1. Use scientific methods and evidence to investigate, evaluate, and improve patient care practice in NICU setting.
2. Identify personal learning needs, systematically organize relevant information resources for future reference, and plan for continuing acquisition of knowledge and skills.
3. Learn to identify limitations and ask for help when needed.
4. Recognize limitations in other team members and provide assistance and educate as needed.
5. Learn to accept feedback and develop plans for self-improvement.
6. Provide feedback to other team members and help them develop plans for self-improvement.
7. Learn to evaluate yourself and make plans to address areas in need of improvement.

Competency 5: Professionalism. Demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles and sensitivity to
1: Demonstrate a commitment to carrying out professional responsibilities while providing care and leadership in the NICU setting.

2: Adhere to ethical and legal principles, and be sensitive to diversity in caring for critically ill newborns.

3: Establish trusting relationships with team members, parents and other healthcare staff.

4: Acknowledge errors and work to minimize them in the future.

5: Display leadership and initiative on the NICU team, including appropriate delegation.

**Competency 6: Systems-Based Practice.** Understand how to practice high-quality health care and advocate for patients within the context of the health care system.

1: Identify key aspects of health care systems, cost control and mechanisms for payment in the NICU setting.

2: Function as a patient advocate and assure junior residents learn to do so as well.

3: Recognize the limits of one’s knowledge and expertise and take steps to avoid medical errors.

4: Be familiar with and participate in quality assurance and performance improvement activities within this setting.

### Procedures

**GOAL: Technical and therapeutic procedures.** Describe the following procedures, including how they work and when they should be used; competently perform those commonly used by the pediatrician in the NICU.

- Arterial puncture
- Endotracheal intubation
- Direct laryngoscopy
- Exchange transfusion: newborn
- Gastric tube placement (OG/NG)
- Lumbar puncture
- Medication delivery: endotracheal
- Pulse oximeter: placement
- Suctioning: nares, oral pharynx, trachea (newborn)
Umbilical artery and vein catheter placement

Ventilation: bag-valve-mask

Ventilation support: initiation

**GOAL: Diagnostic and screening procedures.** Describe the following tests or procedures, including how they work and when they should be used; competently perform those commonly used by the pediatrician in practice.

- Monitoring interpretation: cardiac
- Monitoring interpretation: pulse oximetry
- Monitoring interpretation: respiratory
- Monitoring interpretation: Capnometry/end-tidal CO2
