MicroViewer

- Tab specific to microbiology orders
- View all orders
- Filter the order list
- See the statuses of the orders
- See when the order was last updated
- See organisms that have susceptibility results
- See all results in one screen
- See patient and order information with results
- Reports sorted by type (stain vs. non-stain)
- Similar susceptible susceptibility results highlighted
- True history of actions
- Current antibiotics

start

12:10 PM

Can route for review test for Supervisors or Directors. We will need to set this up.

Routing for review

The screenshot displays the 'PathNet General Lab: Accession Result Entry' application window. The interface includes a menu bar (Task, Mode, View, Help), a toolbar, and a main data area. The 'Selection' section shows 'Accession: 10-118-00087', 'Procedure: All', and 'Test Site: All'. The 'Demographics' section shows 'TEST, LABORDER 900381', 'UHB / N32 / 3303 / A / University Hospital of Bro...', 'Race: ASIAN', 'BELLAM, SAI VIJAYA', and '18 years Female'. The 'Result' table lists various procedures and their status. The 'Manual Routing' dialog box is open, showing a list of routing options.

Procedure	Result	Flags	Status	Prev	Time

Worklist Enhancements-Gen Lab/HLA

- Major Worklist Enhancements
 - Template for specimen placement (ie ELISA plate, Luminex plate)
 - Barcode accession function always available
 - Accession level worklist-all orders on single row
 - Worklist download
 - Pending worklist and auto advance in ARE on perform
 - Display sequence ID in ARE and BRE

Create a download file for Worklist

Pending Inquiry Enhancements

- Pending Inquiry: Display all In-lab orders even after container is logged into another location
- Pending Inquiry options:
 - Select the **All Pending** option if you want to retrieve all pending orders for the selected test site and procedure.
 - Select the **Received Only** option if you want to retrieve all pending orders for the selected test site and procedure that have a specimen container currently logged in to the in-lab location for the test site.
 - Select the **In-Lab Only** option if you want to retrieve all pending orders for the selected test site and procedure that have an in-lab status, regardless of the current location of the specimen container. This was an enhancement to deal with a specimen container with multiple orders where the container has subsequently been logged into another test site. Previously the order would drop off of the pending inquiry list for the test site that the container was prior to the transfer.
- Toolbar icon for Order Result Viewer
- Toolbar icon for BB Patient Product Inquiry

Document imaging

- Document types for non-clinical (orders and Request ID):
 - Requisition forms-batch or single scan of hard copy form requesting laboratory testing
 - Order add-on directives
 - Family pedigree charts
 - Viewed in the context of the order
 - Viewable from within PowerChart. Not supported for clinical reporting
- Document type for laboratory results (supporting information for a result):
 - Consult reports
 - Scanned photos for gels
 - Scanned instrument histograms
 - Scanned reference lab results
 - Viewed in the context of the procedure result, AP case, or AP report
 - Viewable from within PowerChart. Supported for clinical reporting XR
