INTRODUCTION

There are multiple definitions for Clinical Trial as described below.

FDA

IDE REGULATIONS:

Investigation means a clinical investigation or research involving one or more subjects to determine the safety or effectiveness of a device.

IND REGULATIONS:

Clinical investigation means any experiment in which a drug is administered or dispensed to, or used involving, one or more human subjects. For the purposes of this part, an experiment is any use of a drug except for the use of a marketed drug in the course of medical practice.

IRB REGULATIONS

Clinical investigation means any experiment that involves a test article and one or more human subjects and that either is subject to requirements for prior submission to the Food and Drug Administration under section 505(i) or 520(g) of the act, or is not subject to requirements for prior submission to the Food and Drug Administration under these sections of the act, but the results of which are intended to be submitted later to, or held for inspection by, the Food and Drug Administration as part of an application for a research or marketing permit. The term does not include experiments that are subject to the provisions of [part 58 of this chapter](#), regarding nonclinical laboratory studies.

APPLICABLE CLINICAL TRIAL

Applicable Clinical Trial means an applicable device clinical trial or an applicable drug clinical trial. Expanded access use under section 561 of the Federal Food, Drug, and Cosmetic Act ([21 U.S.C. 360bbb](#)) is not an applicable clinical trial.

APPLICABLE DEVICE CLINICAL TRIAL

Applicable Device Clinical Trial means:

- (1) A prospective clinical study of health outcomes comparing an intervention with a device product subject to section 510(k), 515, or 520(m) of the Federal Food, Drug, and

Cosmetic Act ([21 U.S.C. 360\(k\)](#), [21 U.S.C. 360e](#), [21 U.S.C. 360j\(m\)](#)) against a control in human subjects (other than a small clinical trial to determine the feasibility of a device product, or a clinical trial to test prototype device products where the primary outcome measure relates to feasibility and not to health outcomes);

(2) A pediatric postmarket surveillance of a device product as required under section 522 of the Federal Food, Drug, and Cosmetic Act ([21 U.S.C. 3601](#)); or

(3) A clinical trial of a combination product with a device primary mode of action under [21 CFR part 3](#), provided that it meets all other criteria of the definition under this part.

APPLICABLE DRUG CLINICAL TRIAL

Applicable Drug Clinical Trial means a controlled clinical investigation, other than a phase 1 clinical investigation, of a drug product subject to section 505 of the Federal Food, Drug, and Cosmetic Act ([21 U.S.C. 355](#)) or a biological product subject to section 351 of the Public Health Service Act ([42 U.S.C. 262](#)), where “clinical investigation” has the meaning given in [21 CFR 312.3](#) and “phase 1” has the meaning given in [21 CFR 312.21](#). A clinical trial of a combination product with a drug primary mode of action under [21 CFR part 3](#) is also an applicable drug clinical trial, provided that it meets all other criteria of the definition under this part.

COMMON RULE

Clinical Trial means a research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the effects of the interventions on biomedical or behavioral health-related outcomes.

NIH

An NIH Clinical Trial is a research study in which one or more human subjects are prospectively assigned to one or more interventions (which may include placebo or other control) to evaluate the effects of those interventions on health-related biomedical or behavioral outcomes.
